Description:

MEDICAL VERITAS is the pre-eminent journal that serves as an interface between academics, scientists, researchers, medical practitioners, and concerned patients and parents. Relevant topics range from basic research, general medical practice, vaccines, treatments, bias and other conflicts of interest in research, to immunology, vaccine injury, and infectious diseases.

Goals:

1. Attract manuscripts promoting improved health care, not merely what is expedient, convenient or financially rewarding.
2. Foster scientific and social commentary among authoritative spokespersons and the media.
3. Pursue both basic and therapeutic-oriented research.
4. Devise, develop, and evaluate relatively inexpensive diagnostic and therapeutic procedures.
5. Provide principles and applications of suppressed medical and scientific technologies.
6. De-politicize public health.
7. Create a movement to address the adverse vaccine reactions and vaccine-related injuries afflicting children and adults.
8. Investigate risk factors for those individuals with late onset autism, neurological complications and other vaccine adverse events.
9. Investigate the role of vaccine-derived and other biological components in either causing or contributing to disease.

Aims and Scope:

Medical Veritas is dedicated to (a) leveling out the medical playing field, (b) removing conflicts of interest from medical decision making, and (c) educating both patients and healthcare providers by presenting truths that otherwise might be hidden or are misrepresented through public relations propaganda. We will give everyone the opportunity to probe into the world of *Medical Veritas*.

Key aspects include:

academic research	epidemiology
adjuvants	field trials
adventitious agents	Gulf War Syndrome
asthma/allergies	HIV/AIDS
autism	immunity
autoimmunity	immunology of protection
cancer	legislation
clinical trials	molecular biology
cost/benefit	regulation
developmental applications	safety
diabetes	Shaken Baby Syndrome (SBS)
disease prevention	social implications
efficacy	Sudden Infant Death Syndrome
